Doctorado en Ciencias de Recursos Naturales

POTENTIAL INSECTICIDE EXTRACTS ISOLATED FROM *CESTRUM PARQUI L'* HERIT (SOLANACEAE) FOR CONTROLLING OF *HYLURGUS LIGNIPERDA* (FABRICIUS)

**DOCTORAL THESIS IN FULFILLMENT OF
THE REQUIREMENTS FOR THE
DEGREE DOCTOR OF SCIENCES IN
NATURAL
RESOURCES**

CLAUDIA NATALIA HUANQUILEF

ARRIAGADA

TEMUCO-CHILE

2020

**“POTENTIAL INSECTICIDE OBTAINED FROM EXTRACTS ISOLATED FROM
CESTRUM PARQUI L’ HERIT (SOLANACEAE) FOR CONTROLLING OF
HYLURGUS LIGNIPERDA (FABRICIUS)”**

Esta tesis fue realizada bajo la supervisión del director de Tesis Dr. ANDRES EDUARDO QUIROZ CORTEZ, perteneciente al Departamento de Ciencias Químicas y Recursos Naturales de la Universidad de La Frontera y es presentada para su revisión por los miembros de la comisión examinadora.

Thesis summary

"The increase in international trade of forest products has introduced exotic bark beetles into forests, causing significant damage. In Chile, the golden-haired bark beetle has affected radiata pine plantations since the 1980s. The use of the pesticide methyl bromide for fumigation is being phased out due to its ozone-depleting impact. Therefore, researching safe and effective pest control alternatives is essential. The thesis focused on studying the pesticidal activity of extracts from *C. parqui* using different solvents, aiming to find sustainable solutions for pest control. The study investigated how the chloroform fraction of the ethanol extract from *C. parqui* leaves affects feeding deterrence activity at a concentration of 0.6%. The F4 subfraction, obtained with chloroform and ethyl acetate in an 80:20 ratio, exhibited the highest activity compared to the control. Compounds like pentacosane, tetracosane, and tricosane could be responsible for this activity. In summary, the F4 subfractions of the ethanol extract from *C. parqui* could be utilized to develop eco-friendly treatments for managing attacks by *H. ligniperda*."
